

Hospital Bed HB-4020 ICU

Continuous use, constantly changing patients and high hygiene standards in clinics and hospitals place high demands on the material durability and functional diversity of hospital beds. The new multifunctional hospital bed with plastic conversions enables easy cleaning and promises high stability.

With a safe working load of 270kg, the hospital bed meets almost all requirements. State-of-the-art control technology creates optimal functionality, which simplifies the care process for staff and provides a high level of comfort for patients. The new ICU bed with intelligent weighing system is perfectly suited for dialysis and intensive care. The angle indicator mounted in the side rail helps to position the patient at the desired angle of the backrest.

Features:

- integrated weight scale
- integrated control position
- cardiac chair position
- Trendelenburg- / anti-Trendelenburg
- plastic side rails with one-hand operation
- CPR emergency lowering
- integrated bed extension
- 4 wall deflector rolls
